## MEMORANDUM FOR THE RECORD

SUBJECT: Incinerator for Quarters Eye

1. [ ] called this morning to relate that GSA had refused to tap into the furnace stack and proposed to run a separate stack up straight from the incinerator. The stack would be capped and have a screen on top. It is proposed to only run the stack up six feet over the top of the tar paper roof. The undersigned stated that the screen might interfere with proper operation. [ ] stated that they would use  $\frac{1}{4}$ " mesh or larger. Except for the mesh, no other problems were foreseen on operation; however, I took a strong stand that six feet was insufficient from a safety and flyash standpoint. I refused to specify the exact height until consulting [ ] of this office. [ ] could not wait, and it was resolved that the height would be left up to the GSA safety officer. It would be their responsibility.

ACTION - Art to call [ ] as soon as possible and follow up on this installation closely in order that improper installation will not ruin the operation of the unit and hence its reputation -- by such as burning down Quarters Eye.
